INTRODUCTION

Created on the 8th of August 2021, FarmerDoge went live and opened for trading on the Binance Smart Chain (BSC), with its team serving its investors and community honorably ever since.

The team behind FarmerDoge is full of dedicated, passionate like-minded individuals, with talents and expertise in various fields like: coding, web design, networking, cryptocurrency and economic analyses, community work, charity work, graphic design, team coordination, and social media content creators.

Starting off as a meme token with utility, FarmerDoge was the original multi-dividend rewards token to launch on the BSC network, with the goal to reward holders and diversify their portfolios with other BSC tokens.

Now FarmerDoge aims to expand its borders by developing utility platforms to help integrate real world businesses into the untapped potential of blockchain, allowing payment method options for products and services for merchants, shop owners, agricultural farmers and sustainable living solutions.

CONTRACT

[0xEe0736c93E98B2e9fbf11f47dB19E7B68Db71E94](https://bscscan.com/address/0xEe0736c93E98B2e9fbf11f47dB19E7B68Db71E94) (BSCscan link)

FarmerDoge runs on a UUPS proxy pattern contract.

Proxy patterns have no immutable code, allowing code updates or potential to add extra functionality without doing a version migration, creating a more adaptable and sustainable project.

More on proxy patterns:

AUDIT

<https://github.com/farmerdoge/docs/blob/dd8a0fd4f7981a9980352863c44c5bfa3bca4137/FarmerDogeAudit.pdf>

DISCLAIMER

The information and resources contained in this white paper pertaining to FarmerDoge are not intended as, and shall not be understood or construed as financial advice. We are not attorneys, financial advisers, or accountants. The FarmerDoge team, to the best of its abilities, have ensured that all the information and resources are accurate and valuable.

Regardless of anything to the contrary, nothing available on or through the FarmerDoge white paper should be understood as a recommendation.

Anything in this white paper can and will be updated at any time to meet the requirements or challenges that real-world or investment-based aspects may impose.

Cryptocurrency can be volatile, we cannot and will not be held responsible for any losses incurred from any purchase FarmerDoge or partner related. It is in your best interests to seek professional financial advice for anything cryptocurrency related.

TOKENOMICS

Our tokenomics are designed with holders portfolio growth in mind. The tokenomics do occasionally change (rarely) to suit market sentiment, to benefit investors.

Buy & hold CROP and let the volume do the work.

TOTAL SUPPLY

10,000,000,000 (10 Billion tokens)

MAIN TOKENOMIC TAX SET UP:

TAX WITH BUYS 15%

10% Rewards
3% Operations
1% Liquidity
1% C.R.O.P

TAX WITH SELLS 15%

10% Rewards
3% Operations
1% Liquidity
1% C.R.O.P

PRIVATE SALE (62%)

Originally vested for 153 weeks in total, starting from 02/20/2022.

1m drip per week until each wallet holds 50M tokens, then locked for a further 6 months, then 1m drip per week until fully unlocked.

*This has since been nullified as of 10/21/2022

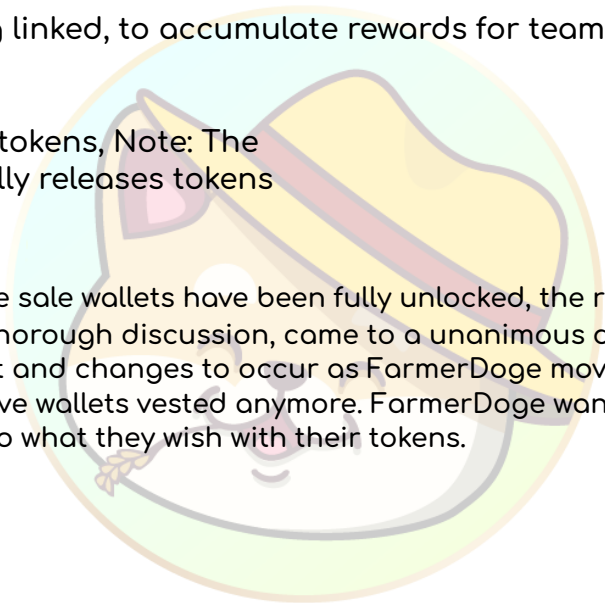

DEV WALLET (5%)

Locked and Multi-Sig linked, to accumulate rewards for team operations.

FAIR LAUNCH (33%)

All after Private Sale tokens, Note: The private sale potentially releases tokens back into the pool.

*As of 10/21/2022, all pre sale wallets have been fully unlocked, the reason behind this is that the team, after a thorough discussion, came to a unanimous decision based on all the future development and changes to occur as FarmerDoge moves forward, that it is no longer necessary to have wallets vested anymore. FarmerDoge wants all investors to have equal opportunity to do what they wish with their tokens.

UTILITY

The native token (ticker name) for FarmerDoge is CROP.
FarmerDoge is a meme token with utility that offers endless possibilities.

The main utility for CROP, is that it allows holders to continuously diversify their investment portfolio with various automatically distributed rewards, via implemented tokenomic taxes within the contract, just by simply holding the token in their wallet, also offering project education and exposure to a broader cryptocurrency space for community and investors.

FarmerDoges unique feature utility is the ability for the rewards token to be switched to any other tokens, native or pegged on the BSC network via a multisig agreement.

The token is switched monthly by the team for a token that the community itself (CROP holders) chooses, via a DAO voting system.

*The monthly selection of candidates that the community can choose from are hand selected and vetted by the team to the best of the team's ability, to ensure that the community has the best, and safest options to choose from.

Every month, three potential candidates are selected and every project prior to the DAO vote being released has the opportunity to join the FarmerDoge community for an AMA session, to pitch their project to the holders and post any relevant informational content that may help the community cast their vote with a more educated outlook. This provides an opportunity for networking with lots of projects on the Binance Smart Chain, utilizing one of the strongest and most underrated marketing tools available (networking)

FarmerDoge also provides a dashboard allowing users to track rewards, graphs and contract addresses for current and previous reward tokens, as well as allowing users to check their wallet queue and reward amounts pending (in BNB). The dashboard will continue to be a centerpiece for CROP holders and will continuously grow and adapt as needed to support all and any FarmerDoge ventures.

DASHBOARD

ECOSYSTEM

The FarmerDoges ecosystem is a shared ecosystem, It consists of its own utility and development, as well as the utility of partnering businesses, projects and products that have been put in place strategically to benefit investors.

FarmerDoge respects and recognizes the resources of surrounding partners who have utilities to offer like educational content, ecommerce products, token staking, in world metaverse businesses, VIP access to events that all involve FarmerDoge, benefiting both parties, as FarmerDoge aims to help with further exposure for these partnered projects utilities, via marketing and offering access to community, through the means of social media platforms, also benefiting CROP investors and/or members of the community who follow social groups. This allows FarmerDoge to continuously network, creating strong connections and support for businesses, partners and investors in return. FarmerDoge never limits itself to opportunities for current and future innovation and movements.

FarmerDoge aims to develop a fully functional marketplace, allowing merchants to connect their products and services through, for exposure that is not available outside of their own website for a larger audience and more viewer traffic. The marketplace also allows full control for merchants to create their own prices, ads and profile display to attract potential customers.

FarmerDoge aims to develop the Community Relief Outreach Program (C.R.O.P). C.R.O.Ps main purpose is to focus on solutions for food supply and distribution issues, as well as human shelter and clothing solutions for the underprivileged. Also C.R.O.P is a charitable movement that will fund all its endeavors with a percentage of revenue and donations from various avenues.

FarmerDoge aims to create a gaming platform for all and any FarmerDoge games that will be developed in the future, as well as supporting all and any partners play to earn and free to play games as well as, in-game NFTs and metaverse access. Furthermore the platform will allow any listings for other projects that want more exposure for their content.

PROBLEMS AND SOLUTIONS

FarmerDoge focuses on four main issues between the Cryptocurrency space and real world issues.

1st, A solution to the high-risk, unsafe, and uneducated corners of Cryptocurrency space.

2nd, A solution to the nature of rewards tokens and how they operate.

3rd, The global food distribution issues that are at large.

4th, integration solutions for real world businesses adapting blockchain.

1.0) THE PROBLEM

As we are all aware, crypto can be a vicious space where projects become self-absorbed and attempt to shut down anything around them, in order to force the idea of alpha in everything they do, to the detriment of themselves, their project, and their holders.

1.1) THE SOLUTION

FarmerDoge prides itself in being a safe space where investors recognize their team and community work hard to grow and sustain what's built, past and future. FarmerDoge stands to believe that helping projects within the space when approached, should be a common thing.

2.0) THE PROBLEM

A very large percentage of reward contracts that are created, only have the ability to farm one reward for the life of the project. Most projects reward you with the native token as a reflection. In order for you to gain access to that value, you would need to sell your reflections in order for you to take profits. The problem with this is that when you trade your tokens back to the native chain coin, you affect the value of that project's charts in the process. These sales can cause unnecessary FUD (fear, uncertainty and doubt) within the project.

2.1) THE SOLUTION

FarmerDoge's ability to farm any token on the BSC network, ensuring you portfolio growth and diversification. We present the community with up to three projects on a monthly basis, vetted by the FarmerDoge team, then the community has a window in which to investigate and gather information on each project, It is then put to vote on which project becomes the next "farm". To be able to vote, you need to be a holder of the CROP token, you then connect your wallet to the DAO voting system (within the dashboard) and cast your vote based on the educational information provided, for your favorite project, keeping the power in CROP holders hands.

3.0) THE PROBLEM

An abundance of fruits and vegetables get discarded by farmers before getting to the big box grocery stores or the local farmer's market. The reason behind this is because the fruits or vegetables do not look appealing or meet certain standards, but they are still very edible. A lot of good food goes to waste because of this. Another reason for food getting tossed away is because of the absence of cold storage facilities. Millions of people around the world are struggling to buy food on a regular basis or lack the resources to be able to grow their own food. Starvation is a constant and growing problem that exists in the world.

3.1) THE SOLUTION

FarmerDoge, through C.R.O.P will endeavor to meet as many farmers as possible. Our goal will be to secure the discarded produce, from there it will be sorted and distributed to local shelters, food banks, or local shop owners. Also, we will provide fruits and vegetables and other ingredients to local restaurants or kitchens that wish to help. Our vision is for fresh meals to be prepared and distributed to those most in need.

4.0) THE PROBLEM

When mentioning blockchain to businesses it can be a make or break topic, currently there is an inevitable evolution to mass adoption but it is slow and risky. New infrastructure is being created every day, but finding something that works is easier said than done.

4.1) THE SOLUTION

Large scale adoption for blockchain will come from integration into real world business and is already changing the way businesses start collecting analytical data, scaling data and infrastructure and even tracking live data from growing food and its distribution journey.

With the development of FarmerDoge markets on the horizon, onboarding businesses with their products and services, connecting them to a new market that offers payment solutions with cryptocurrency as well as ad space and exposure to a new market is a solid solution for any merchant looking to adapt and expand.

THE DAO VOTING SYSTEM

The DAO voting system is designed to boost small holders' voting power while curbing that of the whales. This is to give every one of our holders a voice.

Here's how it works:

100 CROP : 316 votes
1,000 CROP : 3,162 votes
10,000 CROP : 31,622 votes
50,000 CROP : 70,710 votes
#votes > #CROP, up to 100K CROP

100,000 CROP : 100,000 votes <-- #votes = #CROP @100K CROP

#votes < #CROP, after 100K CROP
1,000,000 CROP : 316,227 votes
10,000,000 CROP : 1,000,000 votes
100,000,000 CROP : 3,162,277 votes

The snapshot uses a anti-whale strategy with the inflection point at 100,000 CROP.

We present the community with three projects on a monthly basis vetted by the FarmerDoge team, then the community has a 48 hour window to do their own research on each project. Once the vote concludes, the winning project becomes the next "farm".

.

*To be able to vote, you need to be a holder of the CROP token, before the snapshot is taken, prior to when the DAO voting is released.
After that even if you buy CROP, your voting power will not change until the next vote.

COMMUNITY RELIEF OUTREACH PROGRAM (C.R.O.P)

C.R.O.P is for the people. It is a program that allows FarmerDoge to connect with real world businesses, farmers, shelters, schools and more. With smart web3 integrated systems and network solutions, alongside all the necessary partners and connections. C.R.O.P aims to give power back to the people who are affected by economic inequality, systematic pressures and increasing costs of living, through support avenues, marketing exposure, charity organizations, fundraising, education and cryptocurrency reward systems

C.R.O.P alongside its parent company FarmerDoge with its main business utility platform "FarmerDoge Markets" (F.D.M.), which is an all in one marketplace allowing merchants to create and control their own login for ad spaces to advertise their business or farm with links, product prices, discounts and deals for food, coupons, tools, supply solutions and distribution solutions to a broader consumer market. Together, C.R.O.P. and F.D.M. provides a fair decentralized space for users to control their own market and increase their access to cheaper and local resources.

Aside from business, C.R.O.P. is a charitable organization and has already started helping in south east Asian countries like Laos and U.S. states like North California with food drops and clothing donations to schools. Another goal is to source any extra or food deemed below market standards and help to re-distribute it out to those who need it. Globally we waste up to 1.6 billion tonnes of food per year and 42% of that is fruit and vegetables, there are massive food distribution issues everywhere and Farmerdoge aims to do something about it.

The Community Relief Outreach Program will focus on three main pillars:

- 1). Food for the hungry, by creating a large network of farmers on a global scale, we intend to gather as much food that would be discarded and provide it to the people that need it the most. This will be achieved by our initiatives or partnerships with local charities.
- 2). Supporting vulnerable communities funding social actions in neighborhoods with significant deprivation or poverty. Candidates include (but are not limited to): orphans, street children, street families, homeless individuals, disabled individuals, and disaster stricken areas worldwide.
- 3). Educating and providing for agriculturists, sponsoring free seminar events and providing online educational tutorials about growing food, food distribution, living sustainably and also providing lectures and training on agricultural subjects.

FARMERDOGE MARKETS

FarmerDoge aims to be a fully registered business and a gateway for e-commerce into and not limited to the southeast Asian market. Utilizing real-world and Cryptocurrency based partners, alongside the team's real-world business connections

BENEFITS FOR THE MERCHANT

FarmerDoge aims to create a business platform for both merchants and consumers. Any Merchant looking for new avenues to push their products will be able to sign up and control their very own business section for the consumers to have access to links for discounts and/or recurring specials for products. FarmerDoge will drive user traffic through the platform via the use of community outreach, social networking, and marketing.

BENEFITS FOR THE CONSUMER

Consumers will be incentivized to use the platform as there will be a plethora of businesses to search through for the best deals and discounts they offer. Users will have access through proof of identity in the form of NFTs, Which will allow access to the platform and all the businesses that sign up.

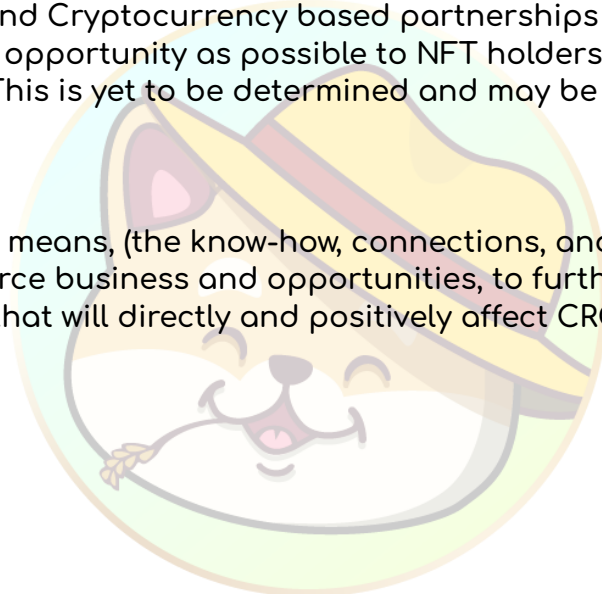

THE NFT

FarmerDoge will release a tier based NFT opportunity (TBD), allowing holders multiple benefits inside the platform and out in the real world, not only will the NFT be an identity for online shopping, It will also allow access to VIP events in the real world like music festivals, music gigs, events, etc.

FarmerDoge has access to music events, shows, and more through real-world and Cryptocurrency based partnerships and will offer as much access and opportunity as possible to NFT holders, depending on what tier NFT they have. (This is yet to be determined and may be adjusted)

CONCLUSION

FarmerDoge has the means, (the know-how, connections, and team) to continuously outsource business and opportunities, to further benefit the project and create revenue that will directly and positively affect CROP holders for a brighter future.

ROAD MAP

PHASE 1

- Whitepaper V1
- Fair Launch
- Website design V1
- Start a Telegram community
- Grow social outreach
- Create and link discord
- Coingecko listing
- CoinMarketCap listing
- Build up the team
- Crypto farm reward networking
- Project networking
- Start creating partnerships
- 1500 token holders
- 1000 Telegram members

PHASE 2

- Website redesign V2
- Launch on Lunarcrush social tool
- Developed dashboard
- TCG expo in Las Vegas
- Team reveals
- V4 contract (final contract mitigation)
- 3000 token holders
- Team growth
- Dashboard UI redesign
- Website redesign V3
- C.R.O.P pre alpha
- Marketplace pre alpha
- Community/Lounge partnerships
- Continue growing the community
- First farming partnerships
- Expanding on existing partnerships

PHASE 3

- Marketplace beta
- Business partnerships
- Merchant onboarding
- FarmerDoge gaming pre alpha
- Merchandise and shop
- Register as an official business
- Revenue overview
- Partnership growth
- Farming integration
- C.R.O.P networking
- C.R.O.P beta
- Charity/fundraising event
- First phase of NFTs
- FDG beta
- Gaming networking
- FarmerDoge mobile games concept creations
- 6000 token holders

PHASE 4

- Game development
- Product expansion
- Partnership focus
- Food growth and sustainable living education tutorials
- Educational reward systems
- Community and School education integration
- Shelter development
- Bridge to multiple chains
- FarmerDoge swap V1
- Second phase of NFTs
- CEX Listings
- FD Lottery integration
- 12,000 token holders
